

Project Design Phase
Problem – Solution Fit Template

Date	22 July 2026
Team ID	TEAM-HT-2026
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? I.e. working parents of 0-5 y.o. kids	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? I.e. spending power, budget, no cash, network connection, available devices.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? I.e. pen and paper is an alternative to digital notetaking	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one, explore different sides.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? I.e. customers have to do it because of the change in regulations.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? I.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)	
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? I.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? I.e. lost, insecure → confident, in control - use it in your communication strategy & design.		8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

Our Problem – Solution Fit – Heritage Treasures Project

Customer Segment(s)	Heritage conservation analysts, government policy makers, tourism boards, and cultural researchers.
Problem	They cannot quickly see which countries/regions hold the most heritage sites, which sites are at risk, or how inscriptions are trending over time.
Existing Alternatives	Manually filtering the raw UNESCO CSV in Excel, or reading separate static reports on at-risk sites.
Behaviour	Downloading the dataset, scrolling/sorting rows, and cross-referencing multiple sources to build a mental picture.
Triggers	A funding review, conservation planning meeting, or tourism promotion campaign that needs quick, defensible insight.
Emotions	Frustration and uncertainty from manual, error-prone analysis; relief when a clear visual answers the question.
Root Cause	The dataset's attributes (Country, Region, Danger, Date_inscribed, Name_en) are not organized for at-a-glance interpretation.
Solution Today	Static spreadsheets and ad-hoc filtering, with no interactive or visual layer.

Solution	An interactive Tableau dashboard and story – treemap by country, pie chart of at-risk sites, and a regional inscription trend line – embedded in a Flask web app.
Customer Constraints	Users may not know Tableau or SQL, so the interface must be self-explanatory with filters and tooltips, not raw data tables.
Channels of Behaviour	Accessed via a published Tableau Server/Public link embedded on an internal or public-facing web page.
